Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

## ALIGNMENTS

AA Human insulin precursor, SEQ ID AAY42859 standard; protein; 52 (first entry) .9-JAN-2000 AAY42859; RESULT 1 AAY42859

Insulin: precursor: growth hormone; chaperone: intramolecular; folging: conformation: chimeric protein; cleavable: recombinant; y:eld. W09950302-A1 Homo sapiens production; 

07-001-1999

38W0-CN00052 98WO-CN00052 31 - MAR - 1998; 31 - MAR-1998; (TONS-) TONGHUA GANTECH BIOTECHNOLOGY LTD.

3an 2;

WPI; 1999-610839/52.

New chimeric proteins containing human growth hormone fragment, used particularly for the production of human insulin  $^{-}$

                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This sequence represents a numan instilin precursor comprising insuling and B chains. This insuling precursor is a component of the chimetic proteins. And B chains follows a component of the chimetic proteins grown in AAV4286. These chimetic proteins additionally contain an Niterminal fragment of huma; growth hormone (hGH) and a cleavable of peptide linker (AAV42857). The hGH pertion of the chimetic protein acts as an intramolecular chaptering for the insuling precises.

CC enabling it to fold correctly. The cleavable peptide linker has a crimenial Arg seside which enables the hGH pertial inker has a crimenial Arg seside which enables the hGH pertial of the control of the combinant human insulin via at hGH-profisation chimetic protein confidence of recombinant human insulin via at hGH-profisation chimetic protein confidence in the folding and the folding of the fused insulin preceived insulin sequences from intracellular degradation by a microprogram; host, but also proceed the fused insuling preceived the solubility of the fused insuling preceived the solubility of the fused insuling preceived.                                                                                                                                                                                                                                                                                                                                        the fusion proteins, thus allowing folding of the fused instill precursor at commercially useful high concentrations. The procedural steps of cyanogen bromide cleavage, oxidative suiphitotysis and related purification steps can thus be eliminated, along with the use of tigh concentrations of mercaptan or the use of hydrophotic absorper, 1981.63

Provinsule is produced by treating recombinant precursor protein with a mercaptan to provide 2-10 SH residues per Cys residue, in presence of a chaotropic agent and in aq. medium of pH 10-11, treating the prou. with 3-50 q hydrophobic adsorber resin per 1 aq. medium of pH 4-7, isolating the adsorbed resin and prorinsulin and desorbing the pro-insulin. This method produces pro-insulin with correctly bonded Cys bridges. Compared with known methods it involves fewer stages (esp. no sulphitolysis or cyanogen bromide cleavage) and overall losses during purification are reduced, i.e. the process is quicker and gives better yields. Sequences of insulin chain A, B and C are given in AAR68895-97. Sequences of insulin chain A, B and C are given in AAR68899-901.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Isolation of insulin that is correctly post-translationally processed - by reacting profinsulin with a mercaptan in the presence of a chaotropic agent and purificn. after absorption to hydrophobic

involves fewer stages (esp. no sulphitolysis or cyanogen bromide cleavage) and overall losses during purification are reduced, i.e. the process is quicker and gives better yields. Sequences of insulin chain A, B and C are given in AAR68895-97. Sequences of pro-insulin 1-4 are given in AAR68898-901. (Updated on 25-MAR-2003 to correct PN field.)

Pro-insulth is produced by treating recombinant precursor protein with a mercaptan to provide 2-10 SE residues per Cys residue, in presence of a chaotropic agent and in ag. medium of pH 10-11.

Treating the prod. with 3-50 g hydrophobic adsorber resin per I ag. medium of pH 4-7, isolating the adsorbed resin and pro-insulin and desorbing the pro-insulin. This method produces pro-insulin with confectly bonded Cys bridges. Compared with known methods it incorrectly bonded Cys bridges. Compared with known methods it incorrectly bonded Cys bridges. Compared with known methods it coleavage) and overall losses during purification are reduced, i.e. the process is quicker and gives better yields. Sequences of insulin chain A, B and C are given in AAR68898-97. Sequences of pro-insulin l4 are given in AAR68898-901.

which contains an example of a proinsulin relecule corresp.
to the general formula 32.81 (82.829 + 7 × 619 (A2.820 + 7 × 17) (1). In
commula (II), X = Lys, Arg or a perpide of 2.85 amino acids of 1.
Lys or Arg at the N-and C-termini Y = a catural amino acids of 1.
Cop or Arg at the N-and C-termini Y = a catural amino acids of 1.
Config. Arg by Arg Dys, a peptide of 2.45 amino acids of 1.
Config. Arg Lys at the N-and C-termini Ns - a natural amino acids of 1.
Config. Arg Lys at the N-and C-termini Ns - a natural amino acids of 1.
Config. Arg Cop and (B2-B29) are the insulin A- and b-chain sequences of acids (A2-A2C) and (B2-B29) are the insulin Ns - and b-chain sequences of acids of 1.
Copanger brownide is reacted with mercaptum at a ratio of 2-16 SH residues of mercaptum per Cys residue of proinsulin. The reaction acids place in the presence of a chaotropic anxillary agent a large place in the presence of a chaotropic anxillary agent a large bildges. Reaction with trypish and opt. carboxypeptidase Byselian of correctly folded insulin. The insulin is isolated by absortion on

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       comprises folding a hybrid polypeptide comprising proinsilin inder comprises folding a hybrid polypeptide comprises folding a hybrid polypeptide comprises. The insulin conditions that folded protein to enzymath oftensien and soldenware can then be purified. This sequence is a SOD insulin produced can then be purified. This sequence is a SOD insulin of the plasmid construct published. This sequence is a SOD insulin of the plasmid construct published Transformation of the property of E.coli host ceals with publish. Transformation of the property expression of the projection. The method produces recombinant numer insuling insuling production. The method produces recombinant numer insuling production. The method produces recombinant numer insuling production to calunal formone. Hazardous and cruberson. Condentical to the attual commone. Hazardous and cruberson. Expression produces involving cyanogen bromide and sulphinolysis to protect sequence are notice into the pages at available to deficiently to the native structure even with the leader attached.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           4.27

                                                                                                                                                                               ArgB31. Agg31 comprises the B and A chains of a claimed human insulin derivative. In the final claimed compsn. they are covalently connected via disulphide bonds between Cys residues A7/B7 and A20/R19. The derivative, which may be present as a zinc ion complex, can be used as a fast a action treatment for diabetes. (Updated on 25-MAR-2003 to correct PN field.)

ArgB31 N-terminal EDAEAEAR. The insulin precursor comprises the B and A chains of a claimed fumman insulin derivative preceded by the N-terminal matro acids EEABATAR. In the innal claimed companiety are covalently connected via disulphide bonds between dys residues A7/87 and A20/R19. The derivative, which may be present as a zinc ion complex, can be used as a fast action treatment for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human insulin precursor ArgB1, ArgB31; diabetes; Zinc Lon nomp.ex:

Argal, Argall N-terminal EPAEARDER. The insulin precursor comprises tics and A chains of a claimed human insulin derivative preceded by the N-terminal amino acids EPAEABAER. In the final claimed compositive are covalently connected via disulphide bonds between Cys residues A7/B7 and A22/B19. The derivative, which may be present disbets:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 AAQ86432 encodes AAR71695 mating factor alpha 1-Insulin precursor

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This sequence is a specific example of an insulin derivative which can be obtained in amorphous, monospherical form by dissolving in an n-propanci/Differ mixture (pH 4.5-6.5) having n-propancl content 15% relative to water. The solution is then diluted with water to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Amorphous, mono-spherical form of insulin derivs. - for treating diabetes mellitus, are produced by diluting soln. in aq. isopropanol, are stable when dried or in suspension
                                                                           This human insulin procursor has correctly positioned disciplide bridges between the A and B chains and is more resistant to proteolytic digestion than prior art insulin precursors. Yeast, strains transformed with LNA encoding this precursor can be cultured to secrete it in high yields. The precursor can be converted into mature numen insulin by transpeptication.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   instin - finback whale (tentative sequence)
Cispecies: Balaenoptera physalus (finback whale, common rorqual)
Cispecies: Balaenoptera physalus (finback whale, common rorqual)
Cispecies: Balaeni A91918
R:Hama, H.; Titani, K.; Sakaki, S.; Narita, K.
Cispecies: 56, 285-293, 1964
A:Title: The amino acid sequence in fin-whale insulin.
A:Reference number: A91918
A:Accession: A91918
                                                                                         Otsperies: Physeler catodon (sperm whale)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            33
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       An other than 1966, 1966
An other than 1966
An other than 1966, 1966
An other species variation in the amino acid sequence of insults.
An effectence number: A90029; MUID:66160119; PRID:5949593
An effectence number: A90029; MUID:66160119; PRID:5949593
An effected type: protein
A. Molecule type: protein to a protein the species of elephant is not given, but it is most probably the Indian elephant
A. Molecule type: Indian the Indian B #status experimental AMATH
